

IMPORTANT INFORMATION

FOR

LABL-27-HG, LABL-38-SG, LABL-45-SG, LABL-49-HG, AND LABL-74-HG

This cooler has passed the QUALITY CONTROL INSPECTION And meets high standards. This inspection includes complete refrigeration System, cabinet construction & finish.

> IMPORTANT PLEASE RETAIN FOR YOUR RECORDS

INSTALLATION AND OPERATING INSTRUCTIONS

1. Installation

a. <u>Receiving Inspection:</u>

Upon receipt, check all packages and accessories or optional components including legs, casters, and shelves.

Legs & Casters: (See Fig. 1)
 Legs screw directly into the base. Casters are screwed directly into the base.

c. Leveling:

To provide adequate condensate drainage and proper door alignment and operation. It is necessary that the cabinet be level. This should be done after cabinet has been set in its final operating position. BE SURE THE DRAIN HOSE IS ATTACHED TO BRACKET NEXT TO EXTERIOR CONDENSATE PAN LOCATED BEHIND BOTTOM GRILLE. THE HOSE COULD BE DISLODGED IN TRANSIT.

d. Shelves:

Shipped inside each cabinet are shelves packed in plastic and a bag of shelf supports. Shelf spacing is adjustable to suit requirements. See Instruction Sheet ILA-0904 for installing.

e. Door Removal and Adjustment:

(1) Slide Doors – Each door has its own Closing Spring located at the top and is positioned for Proper Tension. However if adjustment is required remove doors as follows:

a. Locate Door Rollers under slot A show in fig.4, and lift door off track while tilting bottom of door out.

Adjust spring by moving hook to next hole or by shortening If door gaskets do not seal properly follow step 1 and 2 Step 1: Check to see if cabinet base is level. Sept 2: Adjust the Location of door Rollers in the Roller Brackets. (<u>2</u>) Swing Doors – Spring tension in the bottom hinges is Factory Adjusted for adequate "Swing Back" of doors, and does not require field adjustment. For replacement parts and instructions see enclosed instruction sheet ILA-0859.

f. Locating Cooler:

Provide at least three inches of space between cabinet and any adjacent wall or fixture, at left end and rear of cabinet.

- 2. Operation
 - a. Electrical Supply and Connections:

Plug all standard models into 115 volts A.C. 60 cycle outlet. Low line voltage in often the cause of service complaints. Check to see that the line voltage is 110 volts or more with the unit running. Other motors or heavy appliances should not be used on the same circuit with the cooler. When working on the inside of the cooler disconnect from electrical circuit for safety reasons. CAUTION: If an extension cord is necessary, use only a three wire grounding type of wire 16AWG or larger; do not exceed 20 ft. in length. The use of ungrounded cords or overloaded circuits voids compressor warranty.

- Temperature Control: See Control instructions for more info.
 Factory setting of temperature control is 4°C. To change temperature hold down set key for 3 seconds, press up or down arrow to change set point and press set to finish.
- c. Condensate Disposal:

The evaporator blower housing serves as a pan to collect and direct the condensate to the evaporator pan located behind the front grille. Air flow over the pan hastens condensate evaporation so that external drain plumbing is not required.

- 3. Maintenance Caution: Disconnect Electrical service before accessing mechanical enclosures having moving and/or electrical components.
 - a. Cleaning Cabinet Exterior:

Cabinets should be cleaned with a solution of mild soap and water. Do not use caustic soap or abrasive cleaners, since these might damage the cabinet finish. If stainless steel surface becomes discolored, scrub by rubbing only in the direction of the finish grain. Do not use steel wool.

b. Cleaning Interior Surfaces:

The inside of the cabinet is coated with baked-on vinyl (except stainless steel cooler). To clean, use mild soapy water and cloth or sponge.

c. Condenser:

For efficient operation, it is recommended that the condenser coil and fans be cleaned every 3 to 6 months. Remove front grille for access. Vacuum clean front surface of coil thoroughly or direct forced air through condenser fins. Failure to clean condenser can cause compressor malfunction and will void warranty.

d. Evaporator Fan:

Evaporator pan should be cleaned periodically to prevent odors and maintain evaporating efficiency. The pan contains wicks to assist evaporation and should be replaced periodically.

HINGE TO DOOR AND DOOR TO CABINET ASSEMBLY INSTRUCTIONS

A. Place lower bracket (1) in position on cabinet and loosely fasten with 1/4" hex head bolts, (2). Brackets must be allowed to move up with hand pressure.

B. Place upper bracket (3) in position on cabinet and tightly fasten with 1/4" hex head bolts, (2).

C. Push nylon pivot bushing (4) into the square opening at the door top.

D. Insert cartridge assembly (5) into square opening on bottom of door and secure with #10 countersunk screws, (6).

E. Using the square opening of an extra bottom bracket or a wrench, rotate the square head of the cartridge shaft approximately 120° in closing direction of door. Hinge is now preloaded and ready to be secured to door bracket (See Illus. 7.)

F. Place nylon washer (8), stop spring (9) and second washer (8) over cartridge shaft. Tape to door to secure during mounting of door. Spring, (9) should have tabs facing front of door.

G. Hold door in a 100° position from cabinet face as shown in Illus. (10). Proceed to place upper corner over the protruding bracket pin. Insert square shaft of cartridge into square opening of bottom bracket.

H. Proceed to insert bottom retaining screw, (11). Fasten securely... Door can now be closed and will function properly.

Bi-pin Fluorescent Lamp Installation /Verification

Prior to applying power to the unit, verify that all lamps are properly installed and fully engaged in the lamp holders.

Proper lamp engagement is achieved by rotating the lamp 90° from its insertion position until it "snaps" or "clicks" into place.

Visual verification can be made on units without safety shields by using the identification mark on the end of the bulb. Properly installed bulbs will have the mark centered between the "halves" of the lamp holder.

On units with shields, the identification mark cannot be seen. Physically verify that the lamp has been rotated and locked into place.

See pictures below.

Caution: Improperly installed lamps may cause damage to the lighting circuit. Beverage-Air shall have no liability whatsoever for equipment or component failures or other damages or losses which arise as a result of improper installation.

Bi-pin lamp end Identification mark

Properly installed lamp without shield. Verify identification mark is positioned as shown.

Properly installed lamp with shield. Requires physical verification that lamp has been rotated and locked into place.

Improperly installed lamp with shield. Note that pins have not achieved full 90° rotation.

809-067A

SHELF CLIP INSTALLATION

NSTALLATION INSTRUCTIONS

- DETERMINE PROPER LOCATION FOR SHELF CLIPS. THE REFERENCE NUMBERS ON THE PILASTER CAN SERVE AS A GUIDE TO ENSURE ALL CLIPS ARE
- 2) INSERT TOP TAB OF THE SHELF CLIP INTO THE DESIRED HOLE OF THE PILASTER. THE RETAINING TAB SHOULD BE FACING UPWARDS AS SHOWN. PROPERLY LOCATED.
- 3) ROTATE THE CLIP DOWNWARDS AND INSERT THE BOTTOM TAB INTO THE APPROPRIATE HOLE ON THE PILASTER. THE CLIP MAY NEED TO BE SQUEEZED SLIGHTLY DURING
 - INSTALLATION.
- 5) INSTALL SHELVES ONTO CLIPS WITH THE PRODUCT RETENTION BAR FACING UPWARD. INSTALL ALL REMAINING CLIPS AS DESCRIBED ABOVE.
 - BE CAREFUL NOT TO DISLODGE CLIPS DURING SHELF INSTALLATION.
 - 6) SHELVES MUST BE PLACED SUCH THAT THE RETAINING TAB ON THE SHELF CLIP
- 7) PRIOR TO LOADING THE SHELF, ENSURE THAT THE SHELF IS RESTING ON EACH OF CAPTURES THE SHELF AS SHOWN.
 - 4 CLIPS AND THE CLIPS ARE INSTALLED AS SHOWN.

WARNING

- IMPROPER SHELF CLIP INSTALLATION MAY CAUSE SHELF AND/OR PRODUCT TO FALL RESULTING IN DAMAGE TO THE UNIT AND BODILY INJURY.
 - DO NOT OVERLOAD THE SHELVES. THE UNIT IS DESIGNED TO UTILIZE ALL SHELVES
- THAT ARE SUPPLIED IN AN EQUALLY SPACED MANNER. IF LESS SHELVES OR A DIFF-ERENT CONFIGURATION IS DESIRED, CONTACT THE MANUFACTURER TO ENSURE SHELF OVERLOADING WILL NOT OCCUR.

METHODS FOR CLEANING STAINLESS STEEL

	CLEANING AGENT*	METHOD OF APPLICATION**	EFFECT ON FINISH
Routine Cleaning	Soap, ammonia or detergent and water.	Sponge with cloth, then rinse with clear water and wipe dry.	Satisfactory for use on all finishes.
Stubborn spots and stains, baked-on splatter, and other light discoloration's.	Revere Ware cleaner, Twinkle, or Cameo stainless steel cleaner.	Apply with damp sponge or cloth. Rub with damp cloth.	Satisfactory for use on all finishes if rubbing is light. Use in direction of polish lines.
	Goddard's Stainless Steel Care, Revere Ware Stainless Steel Cleaner, Soft-Scrub.	Apply with damp sponge or cloth.	Use in direction of polish lines. May scratch or dull highly polished finishes.
	Household cleansers, such as Old Dutch, Zud, Bon Ami, Ajax, Comet	Rub with a damp cloth. May contain chlorine bleaches.Rinse thoroughly after use. Rub with a damp cloth.	
Heat tint or heavy discoloration	Revere Ware Stainless Steel Cleaner, Goddard's Stainless Steel Care.	Apply with damp sponge or cloth.	
Burnt-on foods and grease, fatty acids miikstone (where swabbing or rubbing is not practical)	Easy-Off Oven Cleaner	Apply generous coating. Allow to stand for 10 to 15 minutes. Rinse. Repeated application may be necessary.	Excellent removal. Satisfactory for use on all finishes.
Hard water spots and scale	Vinegar	Swab or wipe with cloth. Rinse with water and drv.	Satisfactory for use on all finishes.

*Use of brand names is intended only to indicate a type of cleaner. This does not constitute an endorsement. Nor does the omission of any brand name cleaner imply its inadequacy. Many products named are regional in distributior and can be found in local supermarkets, department and hardware stores.

**It is emphasized that all products should be used in strict accordance with instructions on package.

1. Use the mildest cleaning procedure that will do the job efficiently and effectively.

2. Always rub in the direction of polish lines for maximum effectiveness and to avoid marring the surface.

3. Use only a soft cloth, sponge, fibrous brushes, plastic or stainless steel pads for cleaning and scouring.

4. Rinse thoroughly with fresh water after every cleaning operation.

5. Always wipe dry to avoid water marks.

6. Never use common steel wool pads, these will cause rust!

CHART		SYSTEM
MALFUNCTION	POSSIBLE CAUSE	SOLUTION
Compressor will not start - no hum	1. Line cord not plugged in.	. Plug in the cord.
	2. Fuse removed or blown.	2. Replace fuse.
	3. Overload protector tripped.	3. Refer to electrical section.
	4. Temp control stuck in open position.	 Repair or replace temp control.
	5. Wiring improper or loose.	5. Check wiring against diagram.
Compressor will not start - hums but	1. Low voltage to unit	1. Determine reason and correct
trips on overload protector.	2. Relay failing to close	2. Determine reason and correct, replace
		if necessary
	3. Starting capacitor defective.	Determine reason and replace
	4. Improperly wired.	 Check wiring against diagram
Compressor starts but does not switch	1. Low voltage to unit.	. Determine reason and correct.
off of start winding.	2. Relay failing to open.	2. Determine reason and correct, replace if
		necessary.
	3. Run capacitor defective	Determine reason and replace.
	4. Comp Mt winding is open or shorted *4	4. Determine cause. correct, and replace comp
Compressor starts and runs, but	1. Additional current passing through	1. Check wiring diagram. Check for added fan
short cycles on overload protector.	overload protector.	motors, pumps, etc. connected to wrong
		side of protector.
	2. Low voltage to unit.	2. Determine reason and correct.
	3. Overload protector defective.	Check current, replace protector.
	4. Run capacitor defective.	4. Determine reason and replace.
	5. Excessive discharge pressure. *	5. Check ventilation, restrictions in cooling
		medium, restrictions in refrigeration system.
	6. Compressor too hot - return gas hot. *6	Check refrigerant charge (fix leak if
		necessary). Check air flow across condenser.
Unit runs OK, but short cycles.	1. Overload protector.	1. Check wiring diag for correct wiring
	2. Cold control.	2. Differential set too close.
	3. Overcharge. *:	3. Reduce refrigerant charge.
	4. Air in system.	4. Recover and recharge.
	5. Undercharge. *	5. Fix leak and recharge with refrigerant.
Unit operates long or continuously.	1. Dirty condenser **	1. Clean condenser
	2. Shortage of refrigerant.	2. Fix leak, add charge, correct charge
	3. Temp control contacts stuck or frozen	3. Replace Temp control
	4. Evaporator coil iced.	4. Defrost
	5. Restriction in refrigeration system.	5. Determine location and remove.
Start capacitor open, shorted or blown.	1. Relay contacts not opening properly.	1. Replace relay
	2. Low voltage to unit.	2. Determine reason and correct.
	3. Improper relay.	3. Replace.
Run capacitor open, shorted or blown.	1. Improper capacitor.	1. Determine correct size and replace.
	2. Excessively high line voltage	2. Determine reason and correct.
	(110% of rated max).	
Relay defective or burned out.	1. Incorrect relay.	1. Check and replace.
	2. Line voltage too high or too low.	2. Determine reason and replace.
	3. Relay being influenced by loose	 Remount rigidly.
	vibrating mounting.	
Space temperature too high.	1. Control setting too high.	1. Reset control.
	2. Overcharged with refrigerant. *2	2. Recover refrigerant and recharge with
		proper charge specified on dataplate.
	3. Inadequate air circulation.	3. Improve air movement.
Cooler freezing beverage.	1. Temperature control	1. Reset control.
Unit noisy.	1. Loose parts or mountings.	1. Find and tighten.
	2. Tubing rattle.	2. Reform to be free of contact.
	3. Bent fan blade causing vibration.	3. Replace blade.

4. Fan motor bearings worn.

SERVICE AND ANALYSIS

101 Witmer Road, Suite 700 • Horsham, PA 19044 Phone 1-800-521-0754 • Fax 215-442-9202 www.labrepco.com • sales@labrepco.com

4. Replace motor.
